The death of prof. Vladislav Bezrukov is a serious loss for European medical science and beyond.

“He headed the Institute of Gerontology of National Academy of Science of Ukraine for more than 35 years and led it through many challenges that our institution faced over the years.”

After about twenty years of scientific acquaintances in Kiev, where I worked for a long time with Yuri Gorgo, Victor Martynyuk, Vadym Berevosky and many others, through Konstantin Aptkin I was invited to the XXVIII Conference organized by Vladislav Bezrukov.

The 1 and 2 November 2022 was two long days of great Medical Science where for about an hour I had the privilege of speaking and discussing with colleagues from Kiev, with an invitation to go to Kiev to continue the discussion and start a scientific collaboration https://m.youtube.com/watch?v=6DTB_Zh0Wxg&feature=youtu.be 2-nd day dall'ora 7:47.

The week of the Immaculate Conception, leaving the Tuscan theater, I went to Kiev for one of the most beautiful and relaxing ski weeks of my life also thanks to the friendly hospitality of Konstantin under the auspices of the director.

We started a rich exchange of ideas and clinical experiments also in collaboration with the biophysicist Artur Frolov, an expert in ALTIMED bioelectromagnetic machines. The difficult social moment did not allow us to proceed as we would have liked with our scientific and clinical work.

The illness that suddenly struck the director saw us busy trying to help the Maestro in his last battle.

But we were not lucky and now we must continue the common work we have just started with the support of him which will continue from Heaven where the Master sits at the Table of the Greats as he did in his long and happy life. The illness that suddenly struck the director saw us busy trying to help the Maestro in his last battle.

But we were not lucky and now we must continue the common work we have just started, strengthened by his support which will continue from Heaven where the Master sits at the Table of the Greats as he did in his long and happy life <https://www.youtube.com/watch?v=O0IEDdd-UaU>
